

Recycled Material Content for our Products

National uses two kinds of recycled materials in our products: Post Consumer and Pre Consumer. Post Consumer material is waste that has become material for another product; it has already served a useful purpose. An example of Post Consumer material is aluminum cans that are made into new cans. Pre Consumer material is waste that is left over when producing something else. An example of Pre Consumer material is fabric scraps from cutting material for a chair. The scraps are then used to make trunk liners for cars.

Detailed recycled material content information is available for each of our series in Environmental Data Sheets. These sheets can be found at www.national.com on the product detail pages.

	Post Consumer Content	Pre Consumer Content	Total Percentage of Recycled Content
Executive Desk Seating	11.7%	12.7%	24.4%
Task Seating	11.6%	0%	11.6%
Lounge Seating	0.3%	0.8%	1.1%
Guest Seating	1.5%	0%	1.5%
Stacking Seating	13.7%	17%	30.7%
Veneer & Laminate Casegoods	1.7%	80.6%	82.3%

Recycled material content can help contribute to LEED® points. For additional details, refer to the Environmental Data Sheets.
