Unpack the worksurface and place upside-down on a soft, clean surface to avoid scratches.

Unpack the metal base and place upside-down on top of the worksurface, lining up the pilot holes in underside of the worksurface with the outer-most holes in the metal base. Screw the metal base onto the worksurface starting with these pilot holes and attaching through every pilot hole in the worksurface using the provided screws.

Locate the supplied adhesive backed felt pads from the hardware kit. Apply 2 pads tangent to each other, towards the end of each leg section. 6 pads will be used on 3 leg bases and 8 pads will be used on 4 leg bases.
