Screw the provided adjustable glide into the base of the power entry pole as shown in **Figure B**.

2. Determine where along the center beam you would like the power entry. Using the four provided screws attach the top mounting plate to the bottom side of the center beam as shown in **Figure A**. Verify the power entry pole will not interfere with any other components before attaching.

3. Remove the power entry pole cover to run power entry whip. Re-attach cover when power has been connected.
