Synchronous Tilt Control
Backrest and seat of chair recline in a synchronized 2-to-1 ratio. The back of the chair moves faster than the seat which provides a greater angle between your torso and thighs adding comfort and encourages dynamic movement.

Back Height
Raise or lower backrest of chair to a position that best supports your lumbar. At the correct back height, lower back should fit into the curved lumbar support.

While seated, grasp chair back and lift with both hands.

Tension Control
Increase or decrease tension of chair’s tilt to match your body weight. Proper tension should allow you to lean back easily while providing balanced support when reclining.

Turn knob counter clockwise to increase tension.
Turn knob clockwise to reduce tension.

Pneumatic Lift
Raise or lower seat of chair to minimize pressure placed under thighs. At the correct seat height, feet should rest flat on the floor.

To ensure smooth operations, raise and lower your seat monthly.

To raise chair, pull lever up while lifting body off seat. To lower chair, stay seated and pull lever up.

Tilt Lock
Locks tilt of chair to limit how far back chair will recline. Back can be locked in an upright position or be set to recline freely.

Push lever in to engage lock. Pull lever out to disengage lock.

Seatslide*
Adjusts seat depth to a position that best accommodates length of legs. Reduces pressure behind thighs providing proper back support and long-term comfort.

With back against chair, pull and hold lever up then slide seat forward or back. Release lever to lock.

Armrest Depth/Width/Pivot*
Adjust depth, width and pivot of armrests to help relieve strain on neck and shoulders.

To adjust armrest depth, grasp arm cap and press release button with thumb while moving arm cap forward or backward. Release button to lock in place.

To adjust armrest width, grasp arm cap and press release button with thumb while moving arm cap closer or further away from body. Release button to lock in place.

To change angle of armrest, grasp arm cap and rotate toward or away from body.

Arm Height
Raise or lower arms to support forearms and keep shoulders in a neutral posture. Proper positioning reduces strain in the neck and shoulders.

To adjust arm height, press button on outside of arm support while moving arm up or down. Release button to lock in place.

Arm Width*
Adjust width of arms based on body size and personal preference. Arms should be positioned as close to torso as comfortable for maximum support.

To adjust arm width, press lever against bottom of arm post while sliding arm toward or away from seat. Release lever to lock in place.

ANSI/BIFMA Acceptance
Meets the ANSI/BIFMA X5.1-2002 general purpose office chair testing guidelines developed by the Business and Institutional Furniture Manufacturer’s Association (BIFMA), and approved by the American National Standards Institute (ANSI).

*Your chair may not have all the features and adjustments shown. Please visit www.NationalOfficeFurniture.com for additional product information.
Knee Tilt Control
The chair tilts from a pivot point located near the front edge of the seat. This provides a minimal rise of the seat and allows your feet to stay flat on the floor when the chair is tilted backward.

Back Height
Raise or lower backrest of chair to a position that best supports your lumbar. At the correct back height, lower back should fit into the curved lumbar support.

While seated, grasp chair back and lift with both hands.

Pneumatic Lift
Raise or lower seat of chair to minimize pressure placed under thighs. At the correct seat height, feet should rest flat on the floor. To ensure smooth operations, raise and lower your seat monthly.

To raise chair, pull lever up while lifting body off seat. To lower chair, stay seated and pull lever up.
